

How to care for your biopsy

1. Keep it covered. DO NOT leave it open to the air to breathe. Any wound or biopsy will heal quicker if kept moist and covered.
2. Apply plain Vaseline or Aquaphor to the site. Many people are allergic or sensitive to topical antibiotic creams.
3. Keep the site clean with plain soap and water. DO NOT use peroxide, it can irritate the skin.
4. Keep the wound covered with a simple band-aid. If you are allergic to latex, use latex free paper tape.

If ever in doubt about how your wound is healing. Call the office at 727-888-0900 and ask to speak to a nurse.
